VERIFLO DIVISION

Veriflo Division, Parker Hannifin Corporation is a leading manufacturer of precision valves, regulators and surface mount components for the control and application of liquids and gases used in the fabrication of semiconductors, as well as in the chemical and petrochemical industries.

A Leading Manufacturer Of Precision Valves, Regulators & Surface Mount Components

Veriflo has maintained industry leadership over the past 95 years through innovative engineering, manufacturing and by placing a premium on quality customer care.

The division maintains two state-of-the-art Class 10 Clean Rooms at its Richmond, CA, facility and has adopted a corporate wide "Lean Manufacturing" philosophy, which is delivering greater value to the customer by eliminating wasteful steps through continuous improvement activities.

Veriflo Division's two manufacturing facilities develop and manufacture applications for the Semiconductor/High Purity and Instrument/Analyzer industries.

With the focus of maintaining the highest industry standards,

Maintained Industry Leadership By Placing A Premium On Quality Customer Care

Veriflo Division has achieved an ISO 9001 registration at both its Richmond, CA manufacturing plant and at its Carson City, NV facility. This certification confirms Veriflo's commitment to quality and excellence as recognized by the international community.

The Instrumentation Group of Parker Hannifin specializes in high quality, critical flow components for world-wide process instrumentation, ultra-high-purity, medical, analytical and biopharmaceutical applications.

Parker's Instrumentation Group has ten manufacturing plants and over 300 authorized distributor locations around the world to provide local inventory and technical support. Key markets for the Instrumentation Group include: Chemical Process, Power Generation, Oil and Gas Exploration, Semiconductor Manufacturing, Biomedical, and Analytical Equipment.

Note: For further information on Veriflo Division and or its product line visit the division web site at www.veriflo.com. For more information on Parker Hannifin Corporation visit the corporation's web site at www.parker.com.

Parker Hannifin Corporation's Veriflo Division presents the CyMax manual & pneumatic operated diaphragm valves. The patented, all welded CyMax diaphragm valve offers maximum reliability for your critical applications.

features

- ▶ Tied diaphragm for positive retraction.
- ▶ Multiple diaphragms for maximum cycle life.
- ▶ Elimination of bonnet threads provides compact valve.
- ▶ Heat code traceability on valve bodies, tube stubs and purge ports.
- ▶ Minimal PCTFE seat surface to reduce outgassing, moisture absorption and particle generation.
- ▶ Open/Close indicator standard on manual and pneumatic valves.

options

- ▶ Multiple handle colors available for gas differentiation.
- ▶ Purge Connections in VacuSeal™, UltraSeal™ or A-LOK® compression.
- ▶ Pneumatic Actuators available with Normally Open, Double Acting and Normally Closed configurations in all sizes.
- ▶ Expanded tube ends offered for low flow applications. VacuSeal™, UltraSeal™ and Compression ends available.
- ▶ Vespel® seat optional.

materials of construction

Wetted

Body "VeriClean", Veriflo's custom high purity type 316L Stainless Steel™
 Tubing 316L Stainless Steel
 Seat PCTFE, optional Vespel®
 Diaphragm 316L Stainless Steel,
 Upper Stem 303 Stainless Steel

Non-wetted

Cap screw..... Alloy steel
 Handle Aluminum (option color coded)
 Bonnet..... 316L Stainless Steel
 Bearing..... Bronze Alloy
 Driver Bronze Alloy

operating conditions

Maximum Pressure 275 psig (19 barg)

Maximum operating temperature:
 230°F (110°C)

Design Leak Rate:

Inboard 1×10^{-10} scc/sec He
 Outboard 1×10^{-5} scc/sec He
 Across the seat 1×10^{-10} scc/sec He

surface finishes

Standard Ra 10 micro inch Ra
 optional 5 Ra and 20 Ra (electropolished)

functional performance

Flow capacity C_v 2.5

CyMax Series

Single & Duplex Integrated Component Diaphragm Valves

Parker Hannifin Corporation's Veriflo Division presents the CyMax Single Integrated Component Diaphragm Valves.

Integrated Components reduce the number of welds and eliminate dead legs in your UHP gas delivery system. The compact designs allow multiple drops from a single vertical or horizontal main, without restriction to flow in the main.

features

- ▶ Tied diaphragm for positive retraction.
- ▶ Multiple diaphragms for maximum cycle life.
- ▶ Elimination of bonnet threads provides compact valve.
- ▶ Heat code traceability on valve bodies, tube stubs and purge ports.
- ▶ Minimal PCTFE seat surface to reduce outgassing, moisture absorption and particle generation.
- ▶ Open/Close indicator standard on manual valves.

options

CyMax Series

Ordering Information

Parker Hannifin Corporation's Veriflo Division presents the CvMax 600 Series Bellows Valves. These valves are manufactured specifically for Ultra High Purity Gas Systems.

Parker Bellows Valves are designed with the industry's leading straight-through full flow. There are no restricted paths or bends that would reduce flow and generate particulate. These features provide the highest gas flow with minimal pressure drop.

features

- ▶ Multi-Ply Inconel 625 bellows for maximum cycle life in a small envelope.
- ▶ Minimal PCTFE to reduce outgassing and moisture absorption.
- ▶ Heat code traceability on valve bodies, tube stubs and purge ports.
- ▶ Non-Rising handwheel for optimal clearance.
- ▶ Open/Close Indicators on manual valve.
- ▶ Optimum purge port location.

options

- ▶ Multiple handle colors available for gas differentiation.
- ▶ Purge Connections in VacuSeal™, UltraSeal™ or A-LOK® compression.
- ▶ Multiple Pneumatic Actuators available on most sizes (contact factory).
- ▶ Expanded tube ends offered for low flow applications.
- ▶ Vespel® seat optional.

Parker Hannifin Corporation's Veriflo Division presents the 935 Series 1/2" valve. The 935 provides superior control of gases and liquids under high flow, low pressure conditions where absolute purity is essential. The 935 is a "positive retraction" diaphragm valve — an engineered feature which has reduced the surface area and entrapment potential inherent in bellows valves.

There are no springs or retaining clips in the gas stream. This pure design yields a valve with neither entrapment zones nor particle generating surfaces.

The body of the 935 valve is machined from "Vericlean", Veriflo's low sulfur 316L Stainless Steel™. This proprietary alloy has a higher level of corrosion resistance than either cast or forged metals and provides maximum system integrity and superior surface finishes with enhanced electropolishing. A 10 micro inch Ra or less (.25 micro meter) finish is standard on the 935 and a 5 micro inch or less Ra, (.13 micron) finish is available as an option.

(.25 micro meter) or less
Optional EV= 5 Ra micro inch
(.13 micro meter) or less

QUANTUM 935

Construction

The 935 diagram (Fig.1) illustrates the minimal number of wetted parts in this "positive retraction" style valve. The standard seat is PCTFE, with Vespel® available as an option.

Diaphragm Assembly

The heart of the 935 is the diaphragm assembly, to which a seal carrier has been laser-welded. The diaphragm creates a metal-to-metal seal to the body, the only seal to atmosphere other than the port connection. The seal carrier is connected to the knob stem for positive retraction. The domed diaphragm design allows for maximum stroke while maintaining low stress on the diaphragm weld area.

Features

- ▶ "Vericlean", Veriflo's low sulfur high purity 316L material which enhances electropolishing, welding, and corrosion resistance
- ▶ Internally threadless and springless
- ▶ Fully functional from a vacuum to 300 psig (20.7 barg)
- ▶ Aerodynamic, fully swept flow passages
- ▶ Minimum particle generation and particle entrapment areas
- ▶ 100% Helium leak tested
- ▶ "Hurricane" cleaning, Veriflo's standard proprietary cleaning process, removes metallic ions, organic films and surface adhering particles

Parker Hannifin Corporation's Veriflo Division presents the 935T Series (horizontal cross) 1/2" valve. The 935T provides superior control of gases and liquids under high flow, low pressure conditions where absolute purity is essential. The 935T is a "positive retraction" diaphragm valve — an engineered feature which has reduced the surface area and entrapment potential inherent in bellows valves.

There are no springs or retaining clips in the gas stream. This pure design yields a valve with neither entrapment zones nor particle generating surfaces.

features

- ▶ "Vericlean", Veriflo's low sulfur high purity 316L material which enhances electropolishing, welding, and corrosion resistance.
- ▶ Internally threadless and springless.
- ▶ Fully functional from a vacuum to 300 psig (21 barg).
- ▶ Aerodynamic, fully swept flow passages.
- ▶ Minimum particle generation and particle entrapment areas.
- ▶ 100% Helium leak tested.
- ▶ "Hurricane" cleaning, standard proprietary cleaning process, removes metallic ions, organic films and surface adhering particles.

18 Series

High Flow/Bulk System Diaphragm Valve

Parker Hannifin Corporation's Veriflo Division presents the 18 Series valves. The 18 Series provide a high-flow, positive shut off for high purity gas/fluid systems. This 1/2" and 3/8" spring type diaphragm valve offers superior leak integrity for Manually and Pneumatically Actuated applications with pressure ranges from vacuum to 1500 psig.

features

- ▶ Spring type design.
- ▶ Metal diaphragm sealed.
- ▶ Minimal particle generation.
- ▶ Minimal contributions of moisture, oxygen and hydrocarbons.
- ▶ High cycle life
- ▶ Available with inlet and outlet purge ports.

Parker Hannifin Corporation

About Parker Hannifin Corporation

Parker Hannifin is a leading global motion-control company dedicated to delivering premier customer service. A Fortune 500 corporation listed on the New York Stock Exchange (PH), our components and systems comprise over 1,400 product lines that control motion in some 1,000 industrial and aerospace markets. Parker is the only manufacturer to offer its customers a choice of hydraulic, pneumatic, and electromechanical motion-control solutions. Our Company has the largest distribution network in its field, with over 7,500 distributors serving nearly 400,000 customers worldwide.

Parker's Charter

To be a leading worldwide manufacturer of components and systems for the builders and users of durable goods. More specifically, we will design, market and manufacture products controlling motion, flow and pressure. We will achieve profitable growth through premier customer service.

Product Information

North American customers seeking product information, the location of a nearby distributor, or repair services will receive prompt attention by calling the Parker Product Information Center at our toll-free number: 1-800-C-PARKER (1-800-272-7537). In Europe, call 00800-C-PARKER-H (00800-2727-5374).

The Aerospace Group is a leader in the development, design, manufacture and servicing of control systems and components for aerospace and related high-technology markets, while achieving growth through premier customer service.

The Climate & Industrial Controls Group designs, manufactures and markets system-control and fluid-handling components and systems to refrigeration, air-conditioning and industrial customers worldwide.

The Fluid Connectors Group designs, manufactures and markets rigid and flexible connectors, and associated products used in pneumatic and fluid systems.

The Seal Group designs, manufactures and distributes industrial and commercial sealing devices and related products by providing superior quality and total customer satisfaction.

The Hydraulics Group designs, produces and markets a full spectrum of hydraulic components and systems to builders and users of industrial and mobile machinery and equipment.

The Filtration Group designs, manufactures and markets quality filtration and clarification products, providing customers with the best value, quality, technical support, and global availability.

The Automation Group is a leading supplier of pneumatic and electromechanical components and systems to automation customers worldwide.

The Instrumentation Group is a global leader in the design, manufacture and distribution of high-quality critical flow components for worldwide process instrumentation, ultra-high-purity, medical and analytical applications.
